

VPN Setup Instructions

Set up VPN access for secure remote connections to company resources:

Prerequisites: - Active company account - VPN access approval from your manager - Company-issued device or approved personal device

Download VPN Client: 1. Visit vpn.company.com 2. Log in with company credentials 3. Download the appropriate client for your operating system 4. Install following the setup wizard

Configuration: - Server Address: vpn.company.com - Username: Your company username - Password: Your company password - Protocol: OpenVPN (recommended) or IKEv2

Connection Steps: 1. Launch VPN client 2. Enter server address if not pre-configured 3. Input your company credentials 4. Click Connect 5. Verify connection with green status indicator

Troubleshooting: - Ensure stable internet connection - Check firewall settings (allow VPN client) - Try different server locations if available - Restart VPN client and try again - Contact IT if authentication fails

Security Notes: - Always disconnect when not needed - Never share VPN credentials - Report suspicious activity immediately - Use only for business purposes

For mobile devices, download the company VPN app from your device's app store and use the same credentials.
